Building a native restSearch export

DING A NATIVE RESTSCARCH EXPORT

milar in scope to an export module of the MISP modules

consistent of the milar management of the milar management

Fig. and the milar purposed.

Fig. and the support insend scopes (events, stributes, supplings)

Exp. (1) to have the milar management of the mil

#### SO HOW DOES RESTSEARCH WORK?

- Standardised way of collecting parameters
- Using the parameters, a loop is started to **chunk and gradually build** our export data
- The chunk size depends on memory envelopes
- Each chunk is **converted piece by piece**...
- ... and subsequently are concatenated into a temporary file
- Once no more elements are left, the file is sent in the response

MISP restSearch module development

2022-09-13

–So how does restSearch work?

SO HOW DOES RESTSEARCH WORK?

- Jissing the parameters, a loop is started to chunk an gradually build our export data
- Each chunk is converted piece by piece...
- ... and subsequently are concatenated into a temporar
   ... Once no more elements are left, the file is sent in the response

### WHERE DOES THE MODULE SYSTEM COME INTO PLAY?

- The export modules handle 5 tasks:
  - ► Pass **meta-information** back to restSearch on the export format itself
  - Add a **start segment** to the exported data
  - ▶ Do the actual **conversion** from MISP's internal format to the desired export format
  - Provide a **separator** for data chunks
  - ► Have a **closing segment** for the returned data, based on the formats conventions

-Where does the module system come into play?

MISP restSearch module development

# OUR LITTLE TRAINING MODULE: NIBBLER, THE EVER HUNGRY IDS/IPS

MISP restSearch module development

2022-09-13

-Our little training module: Nibbler, the ever hungry IDS/IPS

JR LITTLE TRAINING MODULE: NIBBLER, THE EVER JNGRY IDS/IPS

### **NIBBLER**

- Simplistic tool with its **own proprietary format**
- Meant to mimic a typical in-house tool
- Lightweight scope, for simplicityś sake
- **■** pipe separated values
- VALUE | TYPE | DESCRIPTION | REFERENCE | ACTION

MISP restSearch module development

\*\*Simplifie tool with to own proprietary format \*\* Meant to mine a typical in-boars tool \*\* Lightweight coop, for implicitly salve \*\* pipe reparted values \*\* pipe reparted values \*\* pipe reparted values \*\* pipe reparted values \*\*

2022-09

—Nibbler

#### **NIBBLER FORMAT - CAVEATS**

- Rules can be prepended by comments, each comment line starting with #
- Some characters have to be escaped in some custom, crazy ways

► linebreaks: ##LINEBREAK##

commas: ##COMMA##

▶ pipes: ##PIPE##

MISP restSearch module development

-Nibbler format - caveats

starting with # # Some characters have to be escaped in some custom, cra.

#### NIBBLER FORMAT

- Value: The actual indicator value
- **Type**: The format of the indicator
- **Description**: A quick description for analysts investigating the alert, why is this relevant
- **Reference**: A backreference that the analyst can use to find out more about the alert
- Action: What should Nibbler do if it trips over the value?

MISP restSearch module development

2022-09-13

-Nibbler format

NIBBLER FORMAT

- # Value: The actual indicator value # Type: The format of the indicator
- I type: The format of the Indicator
   Description: A quick description for analysts investigating
- m Reference: A backreference that the analyst can use to find
- Action: What should Nibbler do if it trips over the value?
- Action: What should Nibbler do if it trips over the value

# SUPPORTED TYPES

- IP
- Domain
- Hostname
- MD5
- SHA1
- SHA256
- Filename

MISP restSearch module development

└─Supported types

# **SUPPORTED VALUES**

- ALERT default behaviour, create an alert.
- BLOCK block the action outright. Only set if the tag nibbler:block is present

MISP restSearch module development

-Supported values

2022-09

 ALERT - default behaviour, create an alert. # BLOCK - block the action outright. Only set if the tag

#### MAPPING THE TYPES TO MISP

- Though we have types to map from MISP, in some cases several types map to a Nibbler type
- We've created a rough **mapping** (this is probably the most difficult task) in advance
- Some MISP types map to a Nibbler type directly
- Composite MISP types map to 2 Nibbler types each

MISP restSearch module development

2 60 7707

-Mapping the types to MISP

NG THE TYPES TO MISP

 Though we have types to map from MISP, in some cases several types map to a Nibbler type

 We've created a rough mapping (this is probably the mo difficult task) in advance

Some MISP types map to a Nibbler type directly
 Composite MISP types map to 2 Nibbler types each

#### MAPPING THE TYPES TO MISP

- ip-dst :: IP
- ip-src :: IP
- domain :: Domain

—The actual legwork, the handler

TUAL LEGWORK, THE HANDLER

pation has been been properly as the second of the second

```
private function __convertAttribute($attribute, $eve
  if (empty($this -> __mapping[$attribute['type']])) {
    // mapping not found — invalid type for nibbler
    return '':
  if (is_array($this ->__mapping[$attribute['type']])
   // handle mappings for composites — slide
   else {
   // handle simple mappings — slide
  // return 1 or 2 lines, separated by separator()
 return implode($this->separator(), $result);
```

MISP restSearch module development

Building an optional internal converter function

ING AN OPTIONAL INTERNAL CONVERTER
ION

private function \_\_convertAttribute(\$attribute, \$ev {
 if (empty(\$this->\_mapping[\$attribute['type']]))
 // mapping not found \_ invalid type for nibbler return ''.

(is\_array(\$this->\_mapping[\$attribute['type // handle mappings for composites - slide else { // handle simple mappings - slide return 1 or 2 lines, separated by separator

## HANDLING THE SIMPLE CASE

```
$result[] = sprintf(
   '%s|%s|%s|%s',
   $this->__escapeSpecialChars($attribute['value']),
   $this->_mapping[$attribute['type']],
   $event['uuid'],
   $this->_escapeSpecialChars($event['info']),
   'ALERT'
);
```

MISP restSearch module development

-Handling the simple case

DLING THE SIMPLE CASE

esult[] = sprintf( '%s|%s|%s|%s|%s',

Sthis→\_escapeSpecialChars(Sattribute['va Sthis→\_mapping[Sattribute['type']], Sevent['uuid'],

Sevent['uuid'], Sthis->\_\_escapeSpecialChars(Sevent['info'] 'ALERT'

#### HANDLING THE CASE FOR COMPOSITES

```
$attribute['value'] = explode(
  '|'. $attribute['value']
foreach (array(0,1) as $part) {
 $result[] = sprintf(
    '%s|%s|%s|%s|%s',
    $this -> __escapeSpecialChars(
      $attribute['value'][$part]
    $this -> __mapping[$attribute['type']][$part],
    $event['uuid'].
    $this -> __escapeSpecialChars($event['info']),
    'ALERT'
```

MISP restSearch module development

Handling the case for composites

HANDLING THE CASE FOR COMPOSITES

Sattribute[value\*] = suplode(
'[", Sattribute [value\*]
);
foreach [straylor,] as Spart] {
foreach [straylor,]

### PUTTING IT TOGETHER

```
private function convertAttribute($attribute, $event) {
  if (empty($this ->__mapping[$attribute['type']])) return '';
  $result = array();
  $attributes = array();
  if (is array($this -> mapping[$attribute['type']])) {
    $attribute['value'] = explode('|', $attribute['value']);
   foreach (array(0,1) as $part) {
     $result[] = sprintf(
       '%s|%s|%s|%s|%s',
        $this -> escapeSpecialChars($attribute['value'][$part]),
        $this -> mapping[$attribute['type']][$part],
        /events/view/ . $event['uuid'],
        $this ->__escapeSpecialChars($event['info']),
       $this -> decideOnAction($attribute['AttributeTag'])
   else
    $result[] = sprintf(
     '%s|%s|%s|%s|%s',
     $this -> __escapeSpecialChars($attribute['value']),
     $this ->__mapping[$attribute['type']],
      /events/view/ . $event['uuid'],
     $this -> escapeSpecialChars($event['info']).
     $this ->__decideOnAction($attribute['AttributeTag'])
 return implode($this -> separator(), $result);
```

MISP restSearch module development

-Putting it together

# ADDING THE FUNCTION THAT DECIDES ON THE ACTION

```
private function __decideOnAction($attributeTags)
 foreach($attributeTags as $attributeTag) {
      $attributeTag['Tag']['name'] ===
        'nibbler:block'
      return 'BLOCK';
  return 'ALERT';
```

MISP restSearch module development

-Adding the function that decides on the action

```
SattributeTag['Tag']['name'] ===
```

# FINALISING THE EXPORT MODULE... THE ESCAPING **FUNCTION**

```
private function __escapeSpecialChars($value)
 $value = preg_replace(
   "/\r|\n/", "##LINEBREAK##", $value
 $value = preg_replace(
   "/,/", "##COMMA##", $value
 $value = preg_replace(
   "/\|/", "##PIPE##", $value
 return $value;
```

MISP restSearch module development

-Finalising the export module... The escaping function

# MODIFYING THE MISP CORE TO KNOW ABOUT THE EX-**PORT MODULE**

- The **models** that we are targeting by scope (Event, Attribute) need to be updated
- They are located in /var/www/MISP/app/Model/
- The global variable **\$validFormats** houses all mappings
- Simply add a new line such as the following:
- 'nibbler' => array('nibbler', 'NibblerExport', 'nibbler')

MISP restSearch module development

-Modifying the MISP core to know about the export module

### LET US TEST THE MODULE!

- Use the **rest client** to test it conveniently
- Both the event and attribute level restSearch function should work
- Simply set the **returnFormat** to nibbler, which should also show up as a valid export format

MISP restSearch module development

2022-09-13

Let us test the module!
