MISP PROJECT

MISP GALAXIES

- MISP started out as a platform for technical indicator sharing
- The need for a way to describe threat actors, tools and other commonalities became more and more pressing
- **■** Taxonomies quickly became essential for classifying events
- The weakness of the tagging aproach is that it's not very descriptive
- We needed a way to attach more complex structures to data
- Also, with the different naming conventions for the same "thing" attribution was a mess
- This is where the Galaxy concept came in

We needed a way to attach more complex structures to dat

Also, with the different naming conventions for the same

m This is where the Galaxy concept came in

SOLUTION

- Pre-crafted galaxy "clusters" via GitHub project
- Attach them to an event and attribute(s)
- The main design principle was that these higher level informations are meant for human consumption
- This means flexibility key value pairs, describe them dynamically
- Technical indicators remain strongly typed and validated, galaxies are loose key value lists

- This means flexibility key value pairs, describe the dynamically
- Technical indicators remain strongly typed and validate galaxies are loose key value lists

THE GALAXY OBJECT STACK

- Galaxy: The type of data described (Threat actor, Tool, ...)
- Cluster: An individual instance of the galaxy (Sofacy, Turla, ...)
- **Element**: Key value pairs describing the cluster (Country: RU, Synonym: APT28, Fancy Bear)
- **Reference**: Referenced galaxy cluster (Such as a threat actor using a specific tool)

MISP Galaxy

ALAXY OBJECT STACK

- Galaxy: The type of data described (Threat actor, Tool, ...)
 Cluster: An individual instance of the galaxy (Sofacy, Turla, ...
 Element: Key value pairs describing the cluster (Country: RU
- Synonym: APT28, Fancy Bear)

 ### Reference: Referenced galaxy cluster (Such as a threat actor
- using a specific tool)

(SOME) EXISTING GALAXIES

- **Exploit-Kit**: An enumeration of known exploitation kits used by adversaries
- Microsoft activity group: Adversary groups as defined by Microsoft
- **Preventive measure**: Potential preventive measures against threats
- Ransomware: List of known ransomwares
- TDS: Traffic Direction System used by adversaries
- **Threat-Actor**: Known or estimated adversary groups
- Tool: Tools used by adversaries (from Malware to common tools)
- MITRE ATT&CK: Adversarial Tactics, Techniques, and Common Knowledge (ATT&CK™)

WHAT A CLUSTER LOOKS LIKE

Galaxies Threat Actor Q - Sofacy Q III iii The Sofacy Group (also known as APT28, Pawn Storm, Fancy Bear and Sednit) is a cyber espionage group believed to have ties to the Russian government. Likely operating since 2007, the group is known to target government, military, and security organizations. It has been characterized as an advanced persistent threat. APT 28 APT28 Pawn Storm Fancy Bear Sednit TsarTeam TG-4127 Group-4127 STRONTIUM Grey-Cloud Alexandre Dulaunoy Florian Roth Thomas Schreck Timo Steffens Country Refs https://en.wikipedia.org/wiki/Sofacy_Group Add new cluster

MISP Galaxy

-What a cluster looks like

IAT A CLUSTER LOOKS LIKE

ATTACHING CLUSTERS TO EVENTS

- Internally simply using a taxonomy-like tag to attach them to events
- Example: misp-galaxy:threat-actor="Sofacy"
- Synchronisation works out of the box with older instances too. They will simply see the tags until they upgrade.
- Currently, as mentioned we rely on the community's contribution of galaxies

MISP Galaxy

2022-09-13

—Attaching clusters to events

ATTACHING CLUSTERS TO EVENTS

 Internally simply using a taxonomy-like tag to attach then to events

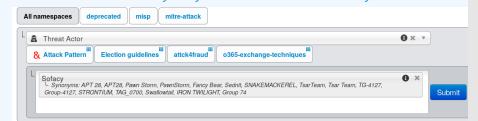

■ Example: misp-galaxy:threat-actor="Sofacy"

 Synchronisation works out of the box with older too. They will simply see the tags until they upgra

Currently, as mentioned we rely on the community

ATTACHING CLUSTERS

Use a searchable synonym database to find what you're after

-Attaching clusters

CREATING YOUR OWN GALAXY

- Creating galaxy clusters has to be straightforward to get the community to contribute
- Building on the prior success of the taxonomies and warninglists
- Simple JSON format in similar fashion
- Just drop the JSON in the proper directory and let MISP ingest it
- We always look forward to contributions to our galaxies repository

MISP Galaxy

2022-09-13

-Creating your own galaxy

ING YOUR OWN GALAXY

Creating galaxy clusters has to be straightforward to get the community to contribute
 Building on the prior success of the taxonomies and

warninglists

■ Simple JSON format in similar fashion

 Just drop the JSON in the proper directory are ingest it

We always look forward to contributions to our galaxie repository
